

Trackwise REACH Statement

Substance registration

Trackwise is classed as a "Downstream User" a producer of articles. As these Articles do not contain substances that are "intended to be released" we are not required to register them. Therefore Trackwise do not have registration obligations.

Registration of formulations or substances used in the manufacturing of these Articles is the duty of our upstream suppliers.

Our suppliers have confirmed that all necessary registration has taken place. Trackwise are in continued contact with our supplier to ensure all registration issues are up to date.

As a downstream user Trackwise have the right to make their uses known to their suppliers, so that the suppliers can include these uses in their chemical safety assessments as "identified" uses or pass the request up the supply chain. In doing so, they provide sufficient information to allow their supplier to prepare an exposure scenario.

Information in the supply chain

Trackwise will communicate information on dangerous substances and preparations down the supply chain through SDSs. We will also communicate information up the supply chain when we gain new information on hazardous properties of the substance or the appropriateness of risk management measures in the SDS supplied to them.

Substances subject to authorisation

Trackwise may use a substance for an authorised use provided they obtain the substance from a company that has received an authorisation for this use and they use it within the conditions laid out in that authorisation. The information on the uses covered by the authorisation and any applicable conditions must be provided by the supplier.

Substances subject to restriction

Substances that are included in the Candidate List have been identified as Substances of Very High Concern (SVHC). These substances may have very serious and often irreversible effects on humans and the environment. Substances on the Candidate List may subsequently become subject to authorisation by decision of the European Commission. 15.12.2010

Trackwise have contacted our suppliers for confirmation that none of the products supplied to us contain any substances present in the most recent version of the "candidate list of Substances of Very High Concern". We have received confirmation of this.

Trackwise are in continued communication with suppliers and will communicate any changes or new legislation.
